

Tiger Resin PPC

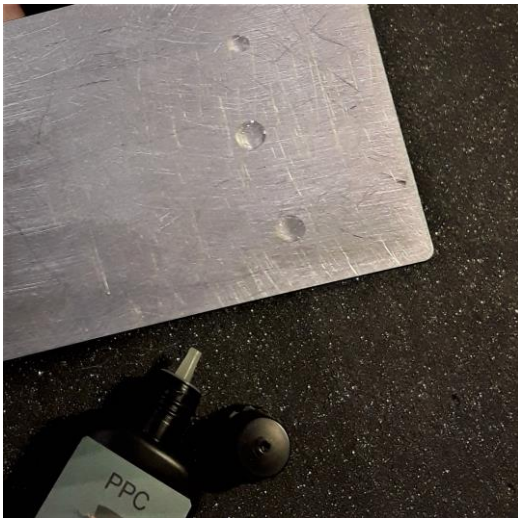

Print-Plate-Connector

We have developed PPC to enhance the adhesion of the prints to the printing platform. PPC will not only increase the adhesion but also reduce the resin used by allowing you to draw smaller bases.

The print will not fall from your printing platform.
Tiger Resin PPC will work with all 3D Printers

You require the Tiger Resin PPC and a plastic or cardboard card to spread the PPC over the printing plate. A regular business card will do the works as well.

Use gloves when working with the PPC

Place 2 to 3 drops on your printing plate.
Understand that you only require a very thin layer.

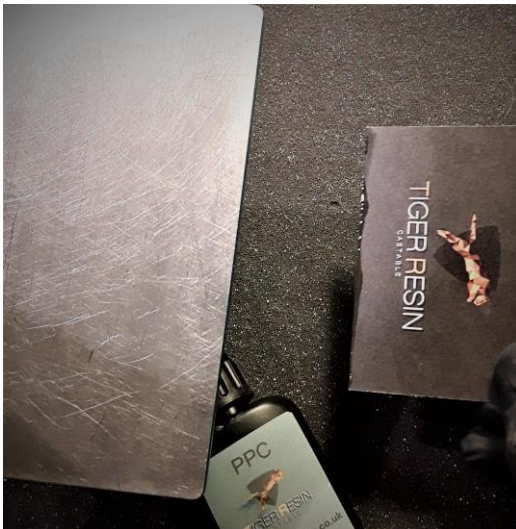

RESIN
CASTABLE

Using a card of your convenience spread the PPC evenly over the complete printing plate.

You will see a thin shiny layer.

This is what you want thin and evenly spread

Please understand that you only need a very thin layer. It should be invisible to the eye and not a thick layer.
